

Installation Guide for LangGraph Photo Editor on Mac (Intel)

Prerequisites

Before starting, make sure you have:

- A Mac with macOS 10.15 (Catalina) or later
- About 2GB of free disk space
- Your API keys ready (we'll add them during setup)

Step 1: Install Homebrew (if not already installed)

Homebrew is a package manager that makes installing software easy on Mac.

1. Open Terminal (find it in Applications > Utilities > Terminal)
2. Copy and paste this entire command and press Enter:

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

3. Follow any prompts that appear (you may need to enter your Mac password)
4. When done, test it worked by typing:

```
brew --version
```

You should see a version number like "Homebrew 4.x.x"

Step 2: Install Python and Git

1. In Terminal, run these commands one at a time:

```
brew install python@3.11
brew install git
brew install imagemagick
```

2. Verify Python is installed:

```
python3 --version
```

You should see "Python 3.11.x"

Step 3: Clone the Repository

1. Choose where to put the app. Run this to create a Projects folder:

```
mkdir -p ~/Projects  
cd ~/Projects
```

2. Download the photo editor code:

```
git clone https://github.com/pranavchavda/langgraph-photo-editor.git  
cd langgraph-photo-editor
```

Step 4: Create a Virtual Environment

This keeps the photo editor's files separate from other Python programs.

1. Create the virtual environment:

```
python3 -m venv venv
```

2. Activate it:

```
source venv/bin/activate
```

You'll see `(venv)` appear at the start of your Terminal line.

Step 5: Install Required Packages

1. Install all the photo editor dependencies:

```
pip install --upgrade pip  
pip install -r requirements.txt
```

This will take 2-5 minutes to download everything.

2. Verify Streamlit installed correctly:

```
pip show streamlit
```

You should see version information. If not, install it directly:

```
pip install streamlit
```

Step 6: Set Up Your API Keys

You need API keys for the AI services. Here's how to add them:

1. Create a file for your keys:

```
nano .env
```

2. Add your API keys (replace the placeholder text with your actual keys):

```
ANTHROPIC_API_KEY=your_claude_api_key_here  
GEMINI_API_KEY=your_gemini_api_key_here  
REMOVE_BG_API_KEY=your_removebg_api_key_here
```

3. Save the file:

- - Press `Control + O` (that's the letter O, not zero)
- - Press `Enter` to confirm
- - Press `Control + X` to exit

Step 7: Test the Installation

1. Run a quick test to make sure everything works:

```
python photo_editor.py test
```

You should see "Configuration test passed!" if everything is set up correctly.

Step 8: Run the Streamlit Web App

1. Start the web interface:

```
streamlit run streamlit_app.py
```

2. Your default web browser should open automatically to `http://localhost:8501`

- - If it doesn't open, manually type that address into your browser

3. You'll see the photo editor interface where you can:

- - Upload single images or multiple images
- - Enter processing instructions
- - Download the enhanced results

Daily Usage (After Installation)

Each time you want to use the photo editor:

1. Open Terminal

2. Navigate to the project:

```
cd ~/Projects/langgraph-photo-editor
```

3. Activate the virtual environment:

```
source venv/bin/activate
```

4. Start the app:

```
streamlit run streamlit_app.py
```

5. Use the web interface in your browser

Stopping the App

- To stop the app: Press `Control + C` in the Terminal
- To deactivate the virtual environment: Type `deactivate`

Troubleshooting Common Issues

"Command not found" errors

- Make sure you're in the right directory: `cd ~/Projects/langgraph-photo-editor`
- Make sure the virtual environment is activated (you should see `(venv)` in Terminal)

"streamlit: command not found" error

If you get this error when running `streamlit run streamlit_app.py`:

1. Make sure your virtual environment is activated (you should see `(venv)`)
2. Reinstall streamlit directly:

```
pip install streamlit
```

3. If that doesn't work, try running it with Python:

```
python -m streamlit run streamlit_app.py
```

"API key not found" errors

- Check your `.env` file has the correct keys: `cat .env`
- Make sure there are no spaces around the `=` sign in the `.env` file

Browser doesn't open automatically

- Manually go to: `http://localhost:8501` in Safari or Chrome

Port already in use error

- Another Streamlit app might be running. Try:

```
streamlit run streamlit_app.py --server.port 8502
```

Then go to `http://localhost:8502` instead

Getting Your API Keys

Claude (Anthropic) API Key:

1. Go to <https://console.anthropic.com>
2. Sign up or log in
3. Go to API Keys section
4. Create a new key

Gemini API Key:

1. Go to <https://makersuite.google.com/app/apikey>
2. Sign in with Google
3. Click "Create API Key"

Remove.bg API Key (Optional):

1. Go to https://www.remove.bg/users/sign_up
2. Create an account
3. Go to API section
4. Get your API key

Need Help?

If you run into issues:

1. Take a screenshot of the error message
 2. Note which step you're on
 3. Contact support with these details
-

Remember: You only need to do Steps 1-6 once. After that, just use the "Daily Usage" section each time you want to edit photos!
